A request for continued examination under 37 CFR 1.114 was filed in this application after a decision by the Board of Patent Appeals and Interferences, but before the filing of a Notice of Appeal to the Court of Appeals for the Federal Circuit or the commencement of a civil action. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on January 5, 2005 has been entered.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Trainor (4,423,084) in view of Ross (5,632,596) and for the reasons set forth by the Board of Appeals in their decision of September 30, 2004 .

Trainor discloses making salad dressing. Table 1 and example 1 shows ingredients that include starch, acidulant, egg, oil, water and sweetener. These ingredients are mixed together and then processed in a colloid mill that includes a rotor and a stator. The claims appear to differ from the reference in the suggestion of the specific apparatus features of the colloid mill. Trainor is silent as to the measurements of the rotor and stator, but the specific apparatus features of the rotor and stator are provided by Ross. Ross teaches the use of the rotor and stator that is known for use in the manufacture foods and emulsions (column 1, lines 5-14). It would have been obvious at the time the invention was made to utilize the rotor and stator or Ross in an edible emulsion, which is a spoonable dressing. Further it would have been obvious to prepare a pre-emulsion prior to emulsifying the food product in order to assist in providing for a uniform final product. Thus in this case applicant is merely utilizing a known colloid mill, that has the rotor and stator of the claims, in a known process for making an emulsified dressing. Applicant has amended the claims to clarify that the motor speed is adjustable. No unobvious or unexpected results are seen from the recitation of the manipulation of the motor speed. This is an apparatus limitation, carrying no weight in these

process claims. Applicant has further amended the claims to indicate that the mayonnaise and salad dressing are made in the same production line. No unobvious or unexpected results are seen from the use of one production line for mayonnaise and salad dressing. Efficient use of factory space would be expected from successful food processor. vention.
